We Deliver Solutions!

The Jobs We Do

Several of the jobs done by L. G. Everist, Inc. employees would surprise many people. One of those areas is a service we've been providing to a tenant customer at 88th Avenue in Henderson, CO for 21 years.

Hill Bros. is an industrial chemical supply company that rails calcium chloride into the 88th Ave yard from Salt Lake City, Utah for distribution to the oil, gas, ready mix, road de-icing and dust control industries. Tetra Chemical is another company which we perform a similar service to in our Kansas City Yard.

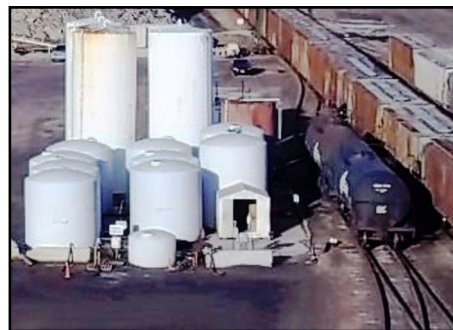

The calcium chloride is shipped in rail cars at a 38% concentration. LGE takes this material and unloads the rail cars by pumping into mixing tanks and "cuts" the concentration down with water to levels the final customers demand and then store for final shipment in a tank farm located on LGE property. Each industry demands a certain percent concentration from 26%, 30%, 32% and 35% and each hold very tightly to these levels.

Our "chemists" that perform this work for LGE at 88th Ave are Juan Monje and Fransico Pastrana. Both of them have been with L.G. Everist for over 15 years. They are the last link in getting the concentrations spot on for final shipment.

Spotlight...Community

The Summit, SD community celebrated the town's 125th anniversary with Fog Fest which included a parade, children's events, lots of food, a dance and other fun activities. Candace Zirbel, Summit scale operator, had a family float in the parade.

Happy Birthday!

We Deliver Solutions!

Los trabajos que hacemos

Varios de los trabajos realizados por los empleados de L. G. Everist, Inc. sorprenderían muchas personas. Una de esas áreas es un servicio que hemos estado proporcionando a un Cliente del inquilino en la avenida 88 en Henderson, CO por 21 años.

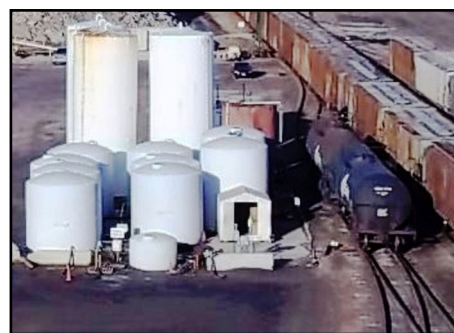

Hill Bros. es una empresa de suministro de productos químicos industriales que carga el cloruro de calcio en el patio 88th Ave de Salt Lake City, Utah, para su distribución en las industrias de petróleo, gas, mezcla lista, deshielo y control de polvo. Tetra Chemical es otra compañía que realizamos un servicio similar en Kansas City Yard.

El cloruro de calcio se envía en vagones a una concentración del 38%. LGE toma este material y descarga los vagones de bombeo en los tanques de mezcla y "corta" la concentración con el agua a los niveles de la demanda final de los clientes y luego almacenar para el embarque final en una granja de tanque situado en la propiedad LGE. Cada industria exige un cierto porcentaje de concentración de 26%, 30%, 32% y 35% y cada uno de ellos se mantiene muy estrechamente a estos niveles.

Nuestros "químicos" que realizan este trabajo para LGE en la 88 Ave son Juan Monje y Fransico Pastrana. Ambos han estado con L.G. Everist por más de 15 años. Son el último eslabón en conseguir el punto de las concentraciones encendido para el envío final. *Matthew Noteboom ~ Henderson, CO*
